How Can You See Website Ranking on Search Engines?

without going to the google or yahoo results and clicking next, next, next?

I would like to test my website under various search terms, and see how changes affect the raw rankings as well. Does google or yahoo provide something for their individual sites, or is this something you need an SEO program for?

You can find some general stats and facts of a website at alexa.com

Also at www.seocentro.com/tools/search-engines/keyword-position.html, you can get to know the positions of your domain for set of keywords.

I hope this will help you.
